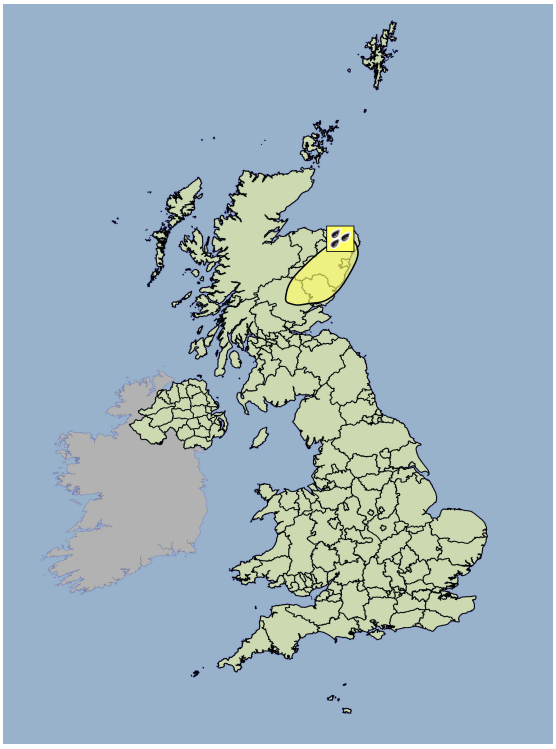
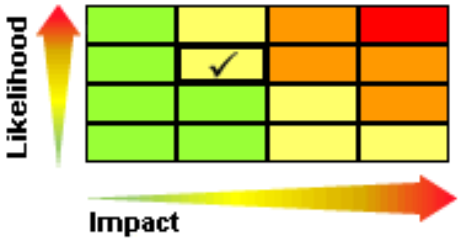
National Severe Weather Warning Service





Chief Forecasters Assessment
A depression moving northeastwards into Scotland will maintain strong, moist southeasterly winds which will hit the rising ground of eastern Scotland, generating large rainfall totals.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **06:00 on Wed, 05th Feb 2014** until **23:45 on Wed, 05th Feb 2014**

Rain will become persistent and heavy at times on Wednesday and will be accompanied by gale force east to southeasterly winds. Rainfall totals of 20-30 mm are expected quite widely with 40 mm or more likely over higher ground.

With river levels remaining high and catchments saturated, the public should be aware that some minor disruption due to river flooding is likely. Run-off from fields will increase the risk of localised flooding on the road network.
